Portfolio

Main

Frontend developer with a strong foundation in creating interactive and responsive user interfaces. Proficient in HTML, CSS, JavaScript, and TypeScript, I specialize in using React and Redux to deliver seamless user experiences.

I excel in crafting animations and visual effects with advanced CSS techniques and pre-processors like SASS, SCSS, and LESS. I also have experience handling server-side data with Axios and integrating Firebase for backend services. My skill set includes version control with Git and GitHub, and I am adept at using design and prototyping tools like Figma.

In addition, I have extensive experience working with external APIs, integrating third-party services into applications to enhance functionality and user experience.

Recently, I have started exploring React Native for mobile application development, driven by my ambition to expand my expertise. I am enthusiastic about learning new technologies and am eager to grow as a developer.

Education

- **Hexlet - Frontend Developer**
  HTML, CSS, Javascript, Typescript, React.js, Redux

Licenses & certifications

- HTML & CSS. Professional website coding.

- HTML & CSS. Adaptive website coding and automation.

- React. Development of complex client applications.

Experience

- **Mentor in web development courses**
  📍 HTML Academy
  Aug 2023 - Present. Remote
  Mentor in web development courses. I assist students with their assignments, explain the principles of semantic HTML and accessibility in web applications, and provide guidance on writing CSS while pointing out and correcting errors.
